## **PREFACE**

This publication is a Service Manual covering the specifications, construction, theory of operation, and maintenance of the Brother facsimile equipment. It includes information required for field troubleshooting and repair--disassembly, reassembly, and lubrication--so that service personnel will be able to understand equipment function, to rapidly repair the equipment and order any necessary spare parts.

To perform appropriate maintenance so that the facsimile equipment is always in best condition for the customer, the service personnel must adequately understand and apply this manual.

This manual is made up of six chapters and appendices.

<b>CHAPTER I.</b>	<b>GENERAL DESCRIPTION</b>
<b>CHAPTER II.</b>	<b>INSTALLATION</b>
<b>CHAPTER III.</b>	<b>THEORY OF OPERATION</b>
<b>CHAPTER IV.</b>	<b>DISASSEMBLY/REASSEMBLY AND LUBRICATION</b>
<b>CHAPTER V.</b>	<b>MAINTENANCE MODE</b>
<b>CHAPTER VI.</b>	<b>ERROR INDICATION AND TROUBLESHOOTING</b>
<b>Appendix 1.</b>	<b>EEPROM Customizing Codes</b>
<b>Appendix 2.</b>	<b>Firmware Switches (WSW)</b>
<b>Appendix 3.</b>	<b>Circuit Diagrams</b>
<b>Appendix 4.</b>	<b>Toner Cartridge Weight</b>

This manual describes the models and their versions to be destined for major countries. The specifications and functions are subject to change depending upon each destination.

## **SAFETY INFORMATION**

### **Laser Safety (110-120V Model only)**

This printer is certified as a Class 1 laser product under the US Department of Health and Human Services (DHHS) Radiation Performance Standard according to the Radiation Control for Health and Safety Act of 1968. This means that the printer does not produce hazardous laser radiation.

Since radiation emitted inside the printer is completely confined within the protective housings and external covers, the laser beam cannot escape from the machine during any phase of user operation.

### **CDRH Regulations (110-120V Model only)**

The Center for Device and Radiological Health (CDRH) of the US Food and Drug Administration implemented regulations for laser products on August 2, 1976. These regulations apply to laser products manufactured from August 1, 1976. Compliance is mandatory for products marketed in the United States. The label shown below indicates compliance with the CDRH regulations and must be attached to laser products marketed in the United States.

The label for Chinese products

MANUFACTURED:      JULY                      1999                      C
BROTHER CORP. (ASIA) LTD.
BROTHER BUJI NAN LING FACTORY
Gold Garden Industry, Nan Ling Village, Buji,
Rong Gang, Shenzhen, China.
This product complies with FDA radiation
performance standards, 21 CFR Subchapter J.

# **CHAPTER I.**

## **GENERAL DESCRIPTION**

# CHAPTER I. GENERAL DESCRIPTION

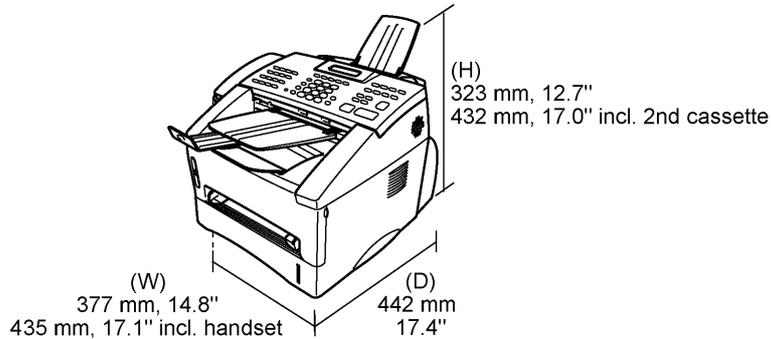

## CONTENTS

<b>1. EQUIPMENT OUTLINE .....</b>	<b>I-1</b>
1.1 External Appearance and Weight.....	I-1
1.2 Components .....	I-1
<b>2. SPECIFICATIONS.....</b>	<b>I-2</b>

# 1. EQUIPMENT OUTLINE

## 1.1 External Appearance and Weight

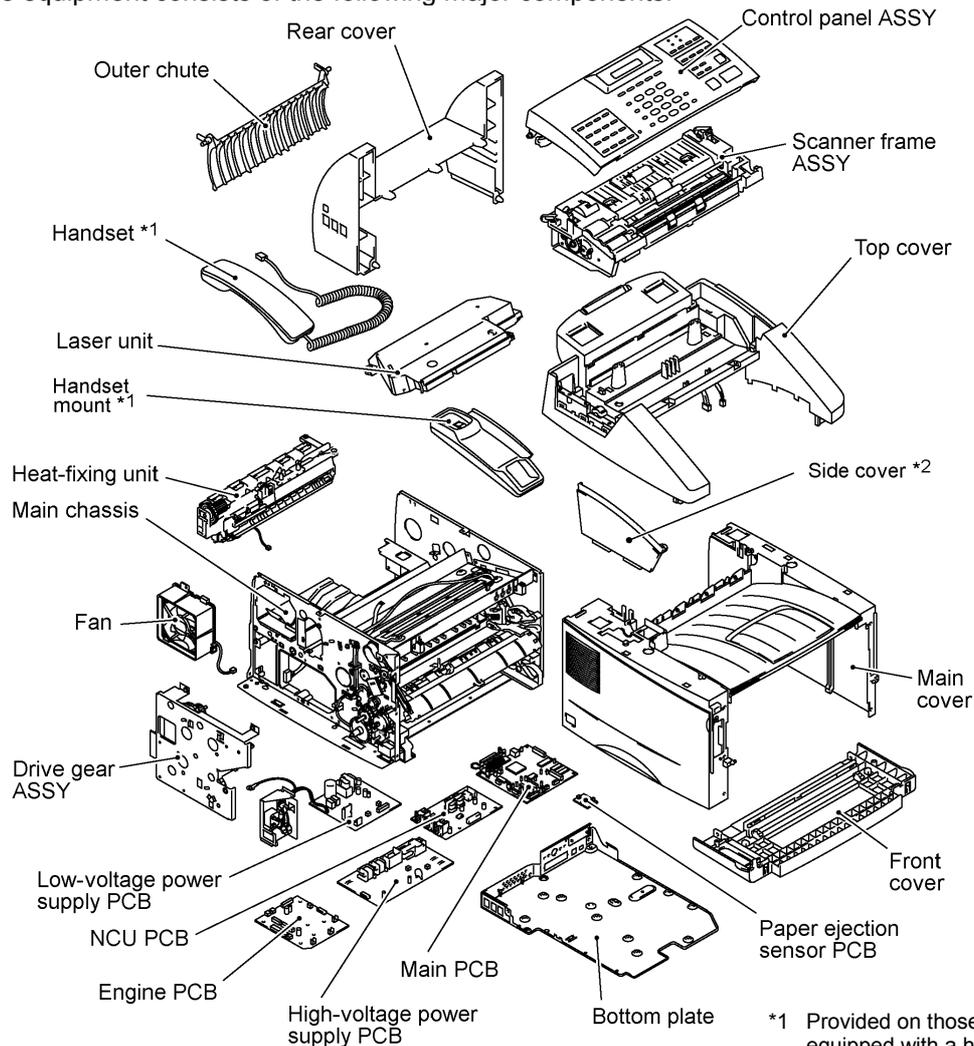

The figure below shows the equipment appearance and approximate dimensions.

Weight:		w/o 2nd cassette	w/ 2nd cassette
Machine proper		10.5 kg	14.0 kg
Machine (incl. drum unit & toner cartridge)		12.0 kg	15.5 kg
In package		16.5 kg	22.0 kg

## 1.2 Components

The equipment consists of the following major components:

\*1 Provided on those models equipped with a handset.

\*2 Provided on those models without handset.

## 2. SPECIFICATIONS

(1/4)

## **INSTALLATION**

## CHAPTER 2 INSTALLATION

### CONTENTS

1. INSTALLING THE UPDATE DATA TO THE FACSIMILE MACHINE..... II-1
2. SETTING ID CODES TO FACSIMILE MACHINES ..... II-3

# 1. INSTALLING THE UPDATE DATA TO THE FACSIMILE MACHINE

If you want to update the current program stored in the flash ROM of the main PCB to the newer version or after you replace the main PCB, install the update program onto the flash ROM.

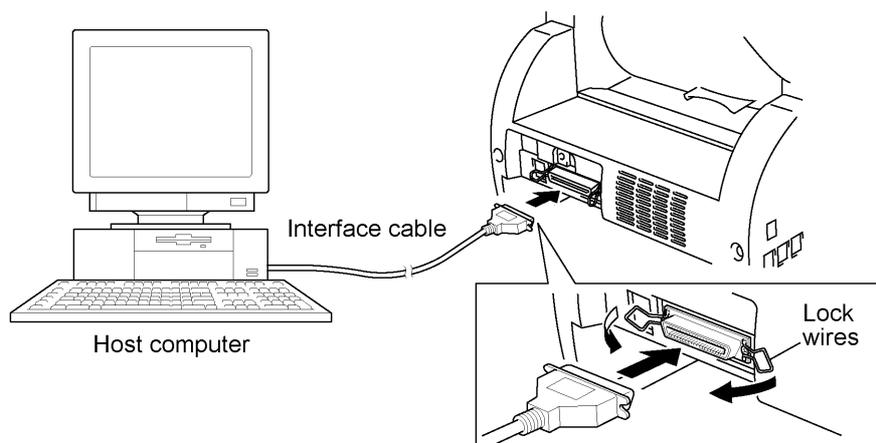

**The program installation requires a PC/AT-compatible computer (which is capable of running MS-DOS or its compatible OS).**

## Connecting the facsimile machine to your computer

- (1) Make sure that your computer is turned off.
- (2) Make sure that the machine's power cord is unplugged from a wall socket. (If the machine has a power ON/OFF switch, make sure that the switch is turned off.)
- (3) Connect the parallel interface cable to the parallel port on the back of the machine and secure it with the lock wires.
- (4) Connect the other end of the interface cable to the printer port of your computer and secure it with the two screws.
- (5) While pressing the **5** key on the machine's control panel, plug the machine's power cord into a wall socket (or turn on the power ON/OFF switch if the machine has the switch).
- (6) Check to see that the following pattern displays on the LCD. If it does not display, go back to step (2) above.

- (7) Turn on your computer.

## Installing the update data onto the flash ROM of the facsimile machine

**NOTE:** The following is an installation procedure example on a PC that is running Windows 95/98.

- (1) Copy the update data and transfer utility onto the desired directory of the hard disk.  
e.g., C:\UPDATE
- (2) Click the Start button, point to Programs, and then click MS-DOS Prompt to open an MS-DOS window.
- (3) Type the drive letter where the update data and transfer utility are located. In the above example, type C:\ from the command line and press the **ENTER** key.

Then type CD UPDATE and press the **ENTER** key.

- (4) Check that your computer is connected with the facsimile machine correctly.
- (5) To start the transfer utility transmitting the update data to the flash ROM of the facsimile machine, type the following:

```
ICEN filename /b
```

Where *filename* is an update data file, e.g., 8500x.upd.

Then press the **ENTER** key.

During downloading, the machine beeps *intermittently*.

Upon completion of the downloading, the machine beeps *continuously*.

**NOTE:** If the facsimile machine cannot return to the standby state after completion of downloading, turn the power off and on.

## 2. SETTING ID CODES TO FACSIMILE MACHINES

Brother facsimile machines are assigned unique ID codes (character strings) at the factory. If you replace the main PCB of the machine, the machine will lose its assigned ID code so that it will not be identified by the connected PC\*.

You need to assign a unique ID code (character string) to the machine according to the procedure given here. For models covered by this manual, set serial numbers given to individual machines as ID codes.

(\*ID codes are essential when more than one machine is connected to a single PC via USB.)

### Connecting the facsimile machine to your PC (See the illustration on page II-1.)

- (1) Make sure that your PC is turned off.
- (2) Make sure that the machine's power cord is unplugged from a wall socket or other power source.
- (3) Connect the interface cable to the parallel interface port on the back of the facsimile machine and secure it with the lock wires.
- (4) Connect the other end of the interface cable to the printer port of your PC and secure it with the two screws.
- (5) Plug the machine's power cord into a wall socket or other power source.
- (6) Turn on your PC.

### Operating procedure

- (1) On your PC, run the ID setting utility. Follow the instructions shown on the PC's screen and enter the 9-digit serial number (e.g., G01012345) printed on the nameplate labeled to the back of the facsimile machine as an ID code. Then press the Enter key.

The ID setting utility will transmit the ID code data from your PC to the facsimile machine and then it will terminate.

The facsimile machine will automatically return to the standby mode.

- (2) To check whether the entered character string (ID code) is correct, make the machine enter the maintenance mode (refer to CHAPTER V, Section 1) and then press the **1** key twice (Subsection 3.5).

The facsimile machine will print out a Configuration List. At the right top of the list, "SER.#: BROXXXXXXXXXX" is printed.

- (3) Check that the character string entered in step (2) is printed in "XXXXXXXXXX."

If it is OK, press the **9** key twice to exit from the maintenance mode.

If something other than that is printed in XXXXXXXXXXXX, check the connection between the PC and facsimile machine and go back to step (1).

# 1. OVERVIEW

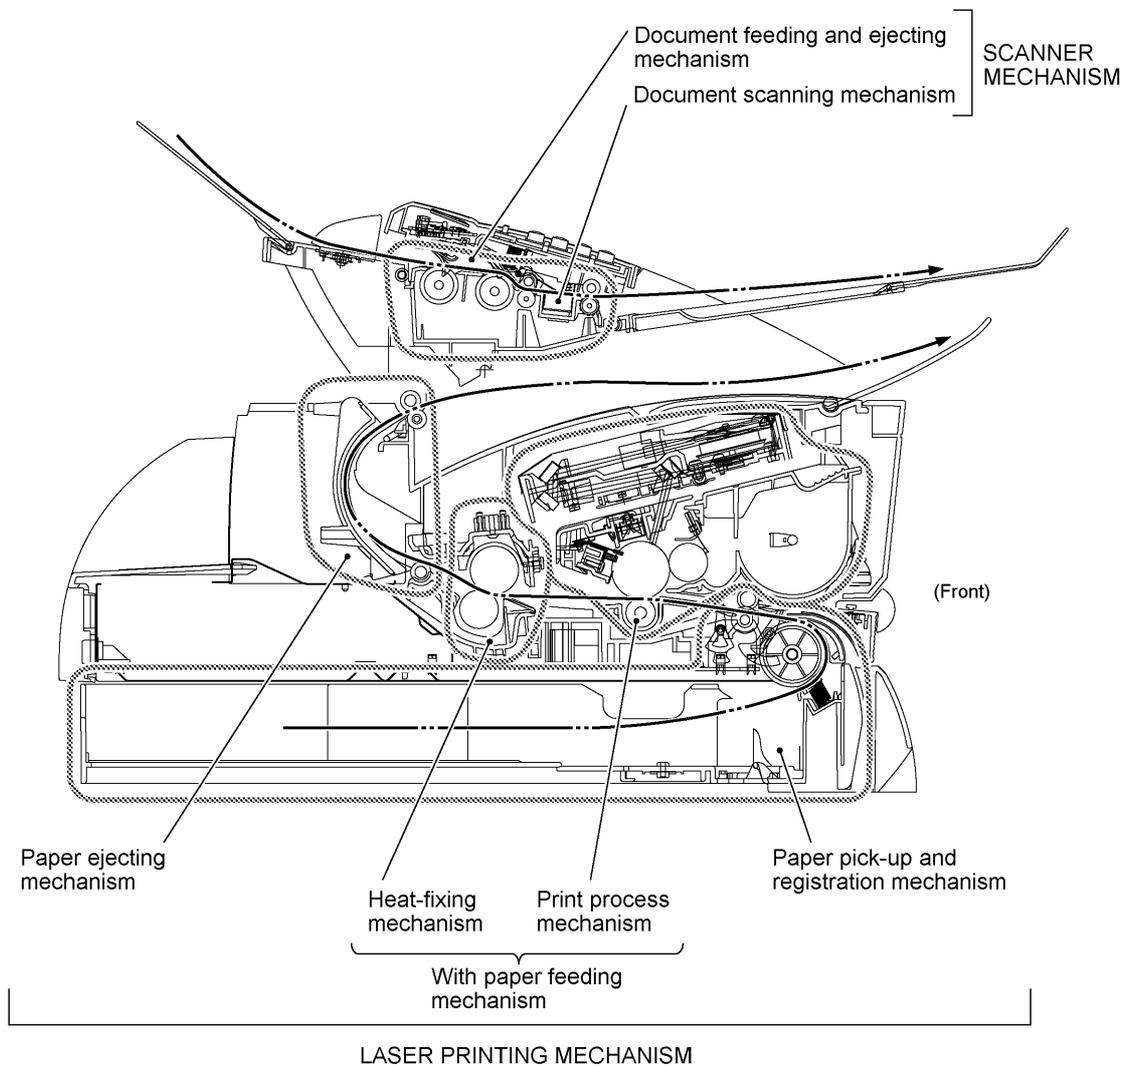

\*Not provided on those models without handset.

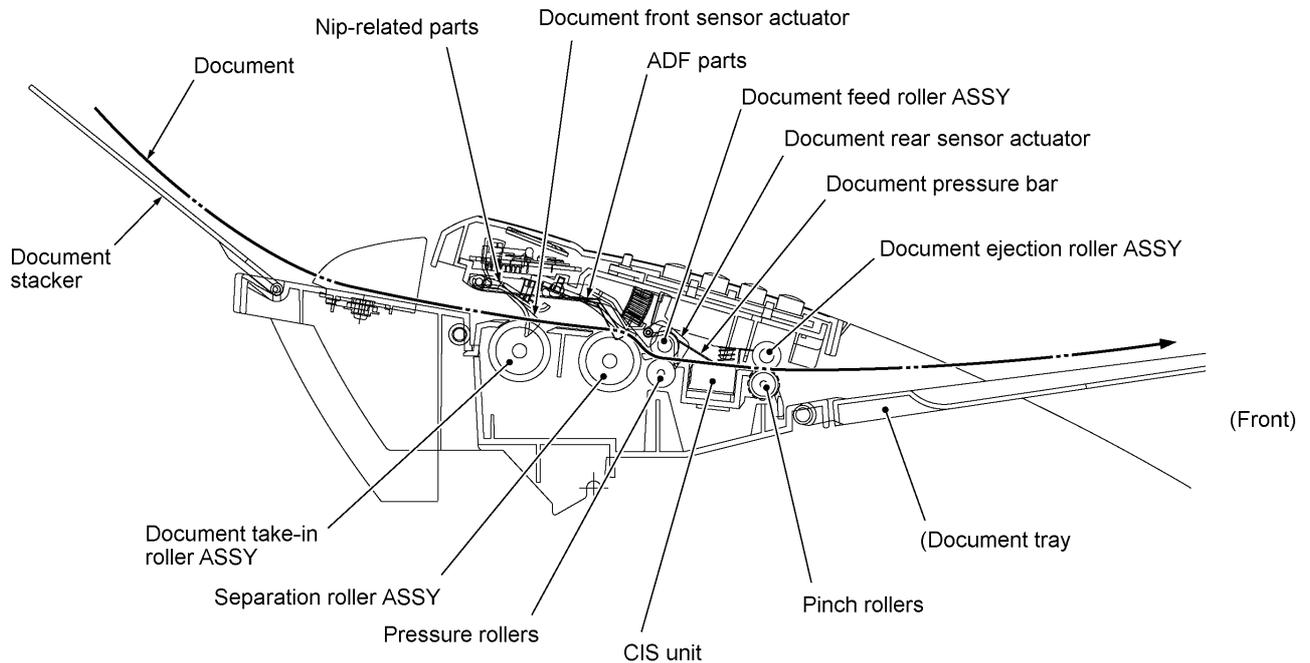

## 2. MECHANISMS

The facsimile equipment is classified into the following mechanisms:

- SCANNER MECHANISM
  - Document feeding and ejecting mechanism
  - Document scanning mechanism
  
- LASER PRINTING MECHANISM
  - Paper pick-up and registration mechanism
  - Print process mechanism (consisting of charging, exposing, developing, and transferring processes) with paper feeding mechanism
  - Heat-fixing mechanism with paper feeding mechanism
  - Paper ejecting mechanism
  
- SENSORS AND ACTUATORS

## 2.1 Scanner Mechanism

### 2.1.1 Document feeding and ejecting mechanism

This mechanism consists of the document stacker, automatic document feeder (ADF), document ejection roller ASSY, and document sensors. (For details about the sensors, refer to Section 2.3.)

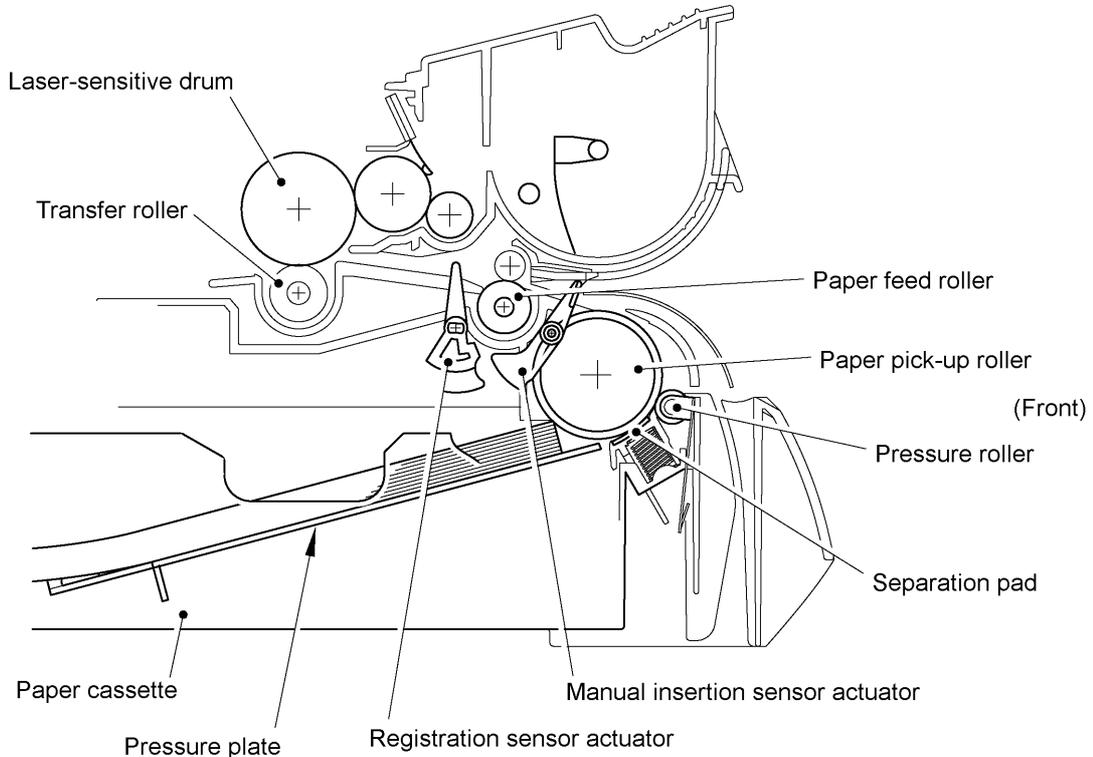

If you set documents on the document stacker with their faces down and start scanning operation, then the scanner motor rotates so that the ADF (which consists of the document take-in roller ASSY, nip-related parts, separation roller ASSY, and ADF parts) feeds those documents into the equipment, starting from the bottom sheet (first page) to the top (last page), page by page. Each document advances with the document feed roller ASSY to the scanner, and then it is fed out of the equipment with the document ejection roller ASSY.

### 2.1.2 Scanner

The scanner uses a contact image sensor (CIS) unit which consists of an LED array illuminating documents, a self-focus lens array collecting the reflected light, a CIS PCB carrying out photoelectric conversion to output picture element data, and a cover glass on which a document advances. When the document passes between the document pressure bar and the cover glass, it is scanned.

## 2.2 Laser Printing Mechanism

### 2.2.1 Paper pick-up and registration mechanism

At the 1st stage, the controller drives the main motor without energizing the solenoid so that the paper feed roller simply idles.

At the 2nd stage, the controller energizes the solenoid so that the paper feed roller no longer rotates and the paper pick-up roller starts rotating to pick up paper into the equipment, a sheet at a time. After the leading edge of the pulled-in paper passes through the manual insertion sensor actuator, the paper is further fed for the specified time length. Accordingly, the leading edge will reach the paper feed roller where the paper skew will be eliminated.

At the 3rd stage, the controller deenergizes the solenoid to rotate the paper feed roller for feeding paper to the transfer block in the drum unit.

When the leading and trailing edges of the paper pass through the registration sensor actuator, the sensor signals them to the controller. According to those signals, the controller may determine the first print position on the paper.
