Profile: EW220E Volvo			

Complete machine, descriptions

Showing Selected Profile

Valid for serial numbers			
Model	Production site	Serial number start	Serial number stop
EW220E Volvo			

The machine is a wheeled excavator with a 360 degree swing movement.

Engine

The machine is equipped with a straight six cylinder, four-stroke, turbocharged diesel engine with direct injection and charge air cooler.

See [Engine, description](#).

Exhaust aftertreatment system

The engine features an exhaust aftertreatment system (EATS) in the form of two mufflers.

The first one contains a diesel oxidation catalyst (DOC) and a diesel particulate filter (DPF) to reduce emissions of particulate matter (PM).

The second one contains a selective catalytic reduction catalyst (SCR) to reduce nitrogen oxide (NOx) emissions.

The SCR uses diesel exhaust fluid, called AdBlue® or diesel exhaust fluid (DEF), to reduce the NOx emissions. An AdBlue®/DEF injection system is used to add this fluid to the exhaust.

See [Exhaust aftertreatment system, description](#).

Electrical system

The machine is equipped with the Volvo CEA2+ (Common Electronic Architecture 2+) electrical system, a computerized monitoring and control system. The different control units are communicating via bus systems.

See [Electrical system, description](#).

See [Electronic control system, description](#).

CareTrack

The machine is equipped with CareTrack, a telematics system developed by Volvo Construction Equipment.

The system stores machine data, e.g., machine position, operating hours, fuel consumption, fuel level, that can be sent by wireless transmission to a computer.

CareTrack is available in different versions, depending on the required information level.

See [CareTrack W-ECU, description](#).

Power Train

The machine is driven by a hydraulic drive motor with a variable displacement.

See [Travel motor \(electric proportional control\), description](#).

The travel gearbox has two hydraulically controlled gears. It is a so-called Powershift gearbox, which means that shifting is possible on the move.

The brakes for gear shifting are applied automatically with spring force and released with servo pressure.

The parking brake is integrated in the gearbox and uses the gearbox brake discs, which are applied by spring force.

See [Travel gearbox, description](#).

The drive axles are equipped with a differential, planetary gear hub reductions and wet multi-disc brakes.

See [Front axle, description](#).

See [Rear axle, specification](#).

Swing system

The swing movement of the machine is performed by a motor with gearbox to reduce the speed and increase the torque.

<https://www.arepairmanual.com/downloads/ew220e-volvo-excavator-service-manual/>

Product: EW220E Volvo Excavator Service Manual

Full Download: <https://www.arepairmanual.com/downloads/ew220e-volvo-excavator-service-manual/>
See [Swing motor description](#).

The swing pinion drives against a swing ring with internal ring gear. The swing ring connects the superstructure with the undercarriage.

A centre passage connects the superstructure and undercarriage hydraulically and electrically.

Brake system

The brake system is a dual-circuit system with two accumulators, operated via the servo hydraulics.

The service brakes are servo-hydraulically operated, self-adjusting, wet, multi-disc brakes in two separate brake circuits.

The service brake pedal is also used as digging brake.

The parking brake is a negative action wet disc brake integrated in the travel gearbox. It is spring applied and pressure released.

See [Hydraulic brake system description](#).

Steering system

The machine is provided with a hydrostatic steering system.

See [Steering system description](#).

Cab

The cab is equipped with an automatically controlled heating and air conditioning system with defroster system for the windows and an ergonomic operator's seat.

See [HVAC system](#).

The cab is approved as a protective cab according to FOPS (Falling Object Protective Structure) and ROPS (Roll Over Protective Structure) – standards.

If any part of the cab's protective structure is affected by plastic deformation or failures, the cab shall be replaced immediately.

Never make any unauthorized changes to the cab, e.g., lowering the roof height, drilling, welding of brackets for fire extinguishers, radio antenna, or other equipment without first discussing the change with Volvo, via a dealer. Volvo decides if the change can lead to nullification of the approval.

Hydraulic system

The machine has a load independent flow sharing hydraulic system which always ensures that each movement receives oil according to the demand and no function stops.

The diesel engine drives the machine's working pump, which gives hydraulic oil flow to the working hydraulics and the travel motor.

The double gear pump is mounted behind the working pump and supplies the servo, brake and steering hydraulics.

See [Description general](#).

Equipment

Different combinations of boom, dipper arm and attachments can be offered. This manual describes the most common standard alternatives.

Sample manual. Download All 3887 pages at:

Document Title: Product identification plates	Function Group: 000	Information Type: Service Information	Date: 3/26/2026
Profile: EW220E Volvo			

Product identification plates

Showing Selected Profile

Valid for serial numbers			
Model	Production site	Serial number start	Serial number stop
EW220E Volvo			

When ordering spare parts, and in all telephone enquiries or correspondence the model designation and the Product Identification Number (PIN) must always be quoted.

Product plate

The product plate on the machine shows the manufacturer's name and address, model designation, Product Identification Number (PIN), machine weight, engine output and the manufacturing year.

Engine product plate

The engine product plate contains type designation, part number, serial number and is positioned on the engine.

Travel gearbox product plate

The travel gearbox product plate contains type designation, part number, serial number and is positioned on the travel gearbox.

Axle product plate

The axle product plate contains type designation, part number, serial number and is positioned on each axle.

Swing gearbox

The swing gearbox product plate contains type designation, part number, serial number and is positioned on the swing gearbox.

Main pump

The main pump product plate contains type designation, part number, serial number and is positioned on the main pump.

Main control valve

The main control valve product plate contains type designation, part number, serial number and is positioned on the main control valve.

Cab

The cab product plate contains cab type, type approval, part number, serial number and is positioned on the left side in the cab.

Model	Production site	Serial number start	Serial number stop
EW220E Volvo			

The tightening torques in the following tables apply to bolts and nuts with tensile strength. The tables should be used as a general instruction for tightening bolts and nuts without specified values. The charts contains values for course thread bolts and nuts.

Torque values should be increased with $\approx 10\%$, for flange bolts.

All standard torques for bolts are without surface treatment.

The standard torque for bolts lubricated with oil should be reduced with 20% of the given value.

Standard tightening torque charts

WARNING

Risk of personal injury.

Faulty or improper lifting equipment could cause the machine to break away from the lifting vehicle, causing accidents, serious injury or death.

Use certified cables, lifting straps, slings, shackles and hooks with adequate load capacity and never lift the machine with a person in or on the machine.

For more information, see operator's manual section [Lifting machine](#).

NOTICE

The person in charge of the transport must see to that loading, positioning, lashing and transporting the machine on a trailer or other vehicle is done according to applicable laws and regulations for the country or state in question. For further information, contact your dealer.

Inspections and actions before transport:

- Inspect lifting or tying-down attachment points on the machine and the trailer for wear and damage before transport and at each service. If they are worn or damaged they must be replaced before transport.
- Choose adequate lashing equipment according to the tables on the next pages.
- Inspect lashing equipment before use. If it shows signs of wear or damage it must not be used, replace it immediately.
- Check that the loading surface of the trailer is free of oil, dirt and ice.
- Clean the machine from mud and stones to avoid pollution on the road and damage on other vehicles.
- Fold down or remove antennas and the rotating beacon on the machine.
- Engage the pivot axle locking and swing brake on the machine before loading on the trailer, see operator's manual section: [Pivot axle locking](#).
- Lock all doors and covers on the machine.

Operation numbers for additional work

Showing Selected Profile

These operations can be used to identify work that is not included in the time guide or described in the methods in the Service Manual. When these operations are used, a description of the work that has been performed must be provided.

Other work related to engine

Op. no. 070-210

This operation can be used when work has been done related to the engine and function group 2 when no applicable method description was available. When this operation is used, additional information is required:

- Description of work that has been done

Other work related to electrical system

Op. no. 070-310

This operation can be used when work has been done related to the electrical system and function group 3 when no applicable method description was available. When this operation is used, additional information is required:

- Description of work that has been done

Other work related to transmission, gearbox, travel motor, swing motor

Op. no. 070-410

This operation can be used when work has been done related to the transmission, gearbox, travel motor or swing motor and function group 4 when no applicable method description was available. When this operation is used, additional information is required:

- Description of work that has been done

Other work related to drive axle

Op. no. 070-470

This operation can be used when work has been done related to the drive axle and function group 46 when no applicable method description was available. When this operation is used, additional information is required:

- Description of required work that have been done

Other work related to brake system

Op. no. 070-510

This operation can be used when work has been done related to the brake system and function group 5 when no applicable

method description was available. When this operation is used, additional information is required:

- Description of work that has been done

Other work related to steering system

Op. no. 070-610

This operation can be used when work has been done related to the steering system and function group 6 when no applicable method description was available. When this operation is used, additional information is required:

- Description of work that has been done

Other work related to frame link, axle suspension

Op. no. 070-710

This operation can be used when work has been done related to the frame link, axle suspension and other parts related to function group 7 when no applicable method description was available. When this operation is used, additional information is required:

- Description of work that has been done

Other work related to cab, air conditioning

Op. no. 070-810

This operation can be used when work has been done related to the cab, air conditioning and other parts related to function group 8 when no applicable method description was available. When this operation is used, additional information is required:

- Description of work that has been done

Other work related to hydraulic system

Op. no. 070-910

This operation can be used when work has been done related to the hydraulic system and other parts related to function group 9 when no applicable method description was available. When this operation is used, additional information is required:

- Description of work that has been done

Gun Style Infrared Thermometer Laser Sight Model: SIG1

9998519 Infrared thermometer (user instruction in FGI 080) Application

This tool can be used to measure fast and easy temperature differences. For instance in case of troubleshooting it is sometimes necessary to measure temperature differences on two equal parts with the same surface.

WARNING

Never point the device towards the eyes permanent eye damage may occur. Use extreme caution when using the laser. Keep out of the reach of children. Be careful around mirror surfaces since mirrors can reflect the laser. Looking into the reflected laser is just as damaging as looking directly at the laser.

General information

1. Field of view: The SIG1 takes it's measurement from a circle of a size determined by a simple ratio of 10:1. The diameter of this circle is 1/10 the distance between the target and the tip of the SIG1. For example, if you're standing 20 feet (610 cm) from your target, the size of the circle you're taking the average temperature of will be 2 feet (61 cm) wide.
2. If you want to get the temperature of something small, such as a pipe, you must get close enough for the pipe to take up the whole viewing area circle. Otherwise the pipe and the background temperatures will be averaged into the reading.
3. You need to be aware that if the target surface is reflective enough, it may reflect infrared from other objects. For example, if you take a reading of a shiny metal surface, the infrared energy of your face may reflect enough energy off the surface to affect the reading. For this reason, it's a good idea to put non-reflective tape or paint on reflective surfaces when taking infrared temperature readings.

NOTE!

The measured temperature will be lower than actual.

Operation

1. Point the laser towards the target to be measured.
2. Pull trigger to light the target with the laser and measure its surface temperature.
3. As long as the trigger is held down, the SIG1 will constantly update the measurement and the blue backlight will illuminate the display.
4. When the trigger is pulled the red laser dot will shine about 1/4" above the centre of the circular area being measured by the thermometer.
5. Once the trigger is released, the last measurement will be shown and held until the trigger is pressed again or until the SIG1 turns off.

88830657 Pump is adapted for draining and filling oils in the machine.
Do not use the pump for coolant or AdBlue®/DEF.

Figure 1
88830657Pump

1. Transport case
2. Power adapter, battery
3. Power adapter, 12 V/24V-outlet
4. Power cable
5. Pump with flow meter and hose 2x2 metres (79 in)
6. Hose adapter for connecting to drain/fill nipple
7. Extension hose 3 metres (118 in)
8. Adapter
9. Suction pipe

Power supply

Connection of the pump to a power source can take place in two ways:

Power socket

Connect the power adapter to the power socket of the machine.

Battery

Connect the power adapter to the battery on the machine.

Red clamp to the positive (plus) connection and black clamp to the negative (minus) connection.

Draining / Filling

Figure 2

Flow direction,

1. Rocker-return pumping position
2. OFF
3. Fixed pumping position

NOTE!

Always complete draining and filling in one operation to avoid pumping in the wrong oil type in the system.

Draining

1. Connect the pump to a suitable power source.
2. Connect the pump to the prescribed drain point with suitable adapter. The pump should always be connected so that the oil is pumped in the direction of the arrow, as shown in figure.
3. Hang up the pump in a suitable place for easier operation and reading of the flow meter.
4. Insert the drain hose in a suitable container.
5. Start the pump with the switch. The switch has three positions: OFF, rocker-return pumping position, and fixed pumping position.
6. Turn off the pump when the system is empty.

NOTE!

If the pump is not used for draining, then before filling it is important to make sure that the wrong oil type is not pumped into the system. This is done by rinsing the pump and its hoses with at least 2 litres (0.53 US gal) of the prescribed oil type.

Filling

1. Connect the pump to the prescribed fill point with suitable adapter. The pump should always be connected so that the oil is pumped in the direction of the arrow, as shown in figure.
2. Insert the pump's suction hose with the suction pipe in a container with new oil.
3. Start the pump with the switch. The switch has three positions: OFF, rocker-return pumping position, and fixed

pumping position.

4. Fill the indicated oil volume.

NOTE!

Optional special tool for calibrating the Dig Assist linkage.

Use in combination with laser level "Bosch GPL 3 Professional" only.

NOTE!

If laser level "Bosch GPL 3 G PROFESSIONAL" is used, replace the bracket (1) by a modified bracket. See [E-3511](#). This is necessary due to a different height of the new laser.

Refer to [36703-3 Dig Assist, calibration, linkage](#).

Op nbr

Tools:

[88830540 Fixture](#)

1. Attach the bracket (1) to an arm or boom pin.
Place the laser level on the bracket.
